INFOTECH

Indi Infotech offers IT services in development of customised software, designing & development of dynamic websites, web streaming, domain registration, search engine optimization, logo creation, high class multimedia presentations, exclusive brochure designing, corporate branding and Internet marketing for small to large businesses. Trusted by many for about a decade, the team ensures the quality and prompt delivery of job all throughout, keeping in mind the budget of each of our clients.

We strive to create sites that make an impact. We combine creativity and functionality in creating websites that are not only visually attractive but also efficient in terms of content, browser compatibility and download time. Our teams of web engineers are skilled in a wide range of web development tools. Our multimedia engineers create presentations which can act as great marketing tools. State of the art technology is applied in developing front-end and back-end functions in applications designed by us. We have skills and experience to provide complex solutions at competitive rates yet keeping the quality of the work intact.

We firmly follow a solution delivery methodology that allows us to consistently deliver the highest quality results. This process ensures that we repeatedly execute projects on time and in budget. It is our strong project management team and quality assurance approach that ensures guaranteed success.

We consider every client a partner in our mutual success. We identify every opportunity to create value by helping you understand the 'big picture'. We do not recommend a technology solution unless it has solid purpose and meets a specific business need. We keep your business at the forefront when we deliver a solution, and every decision we make, takes your present and future goals into consideration.

With a strong passion for solving business problems with technology solutions, Indi Infotech offers end-to-end solutions starting with requirements gathering, to design and development to backup and disaster recovery.
